Notice of Informal Patent Application

DETAILED ACTION

Restriction/Election Requirement

This application contains claims directed to the following patentably distinct species in terms of the contents of the set of constraints:

- (A) The set of constraints includes a set of distance constraints, as in claim 2, and
- (B) The set of constraints includes a set of volume constraints, as in claim 3.

The species are independent or distinct because they involve distinct elements and parameters. Distance constraints and volume constraints are distinct parameters and require different mathematical equations to analyze. Searching of both species would involve different search fields and thus would not be coextensive.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, (A) or (B), for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, at least claim 1 is generic.

This application also contains claims directed to the following patentably distinct species in terms of the contents of the set of atoms:

- (C) The set of atoms includes at least one real atom, as in claim 6, and
- (D) The set of atoms includes at least one abstracted atom, as in claim 7.

The species are independent or distinct because they involve distinct elements and parameters. Real atoms and abstracted atoms are distinct components with distinct properties and

features, and will have distinct atomic coordinates. Searching of both species would involve different search fields and thus would not be coextensive.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, (C) or (D), for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, at least claim 1 is generic.

This application further contains claims directed to the following patentably distinct species in terms of the mechanism by which the subset of atoms is chosen:

- (E) The subset of atoms is chosen at random, as in claim 8, and
- (F) The subset of atoms is chosen with a probability that depends on whether the at least one associated constraint is a distance or volume constraint, as in claim 9.

The species are independent or distinct because they involve distinct elements and parameters. Choosing a subset of atoms at random or with a probability that depends on whether the at least one associated constraint is a distance or volume constraint are distinct procedures requiring distinct mathematical manipulations. Searching of both species would involve different search fields and thus would not be coextensive.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, (E) or (F), for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, at least claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable

Art Unit: 1631

thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Because these species are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shubo (Joe) Zhou, whose telephone number is 571-272-0724. The examiner can normally be reached Monday-Friday from 8 A.M. to 4 P.M. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Irem (Remy) Yucel, Ph.D., can be reached on 571-272-0781. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the

Art Unit: 1631

problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public. For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.
